

Amendments to the Claims: This listing of claims will replace all prior versions, and listings, of claims in the application

Listing of Claims:

Claims 1-25 (Canceled)

26. (Currently Amended) A system for treating vasculature, comprising:

a main component having a superior end, an inferior end and a midsection therebetween, the midsection having an outer diameter that is smaller than an outer diameter of the superior end and an outer diameter of the inferior end with a first transition ~~extending~~ bridging between the superior end and the midsection and a second transition ~~extending~~ bridging between the inferior end and the midsection;

at least ~~one~~ two limbs extending from either the first or second transition and defining ~~an~~ respective openings; and

~~an~~ respective extension components sized to mate with the opening of the at least ~~one~~ two limbs.

27. (Currently Amended) The system of claim 26 wherein the at least ~~one~~ two limbs ~~extends~~ extend from the first transition.

28. (Canceled)

29. (Currently Amended) The system of claim ~~27~~ 26 wherein at least three limbs defining an opening extend from one of the first or second transitions and a respective extension component is sized to mate with the opening of each of the limbs.

30. (Currently Amended) The system of claim 26, wherein the vasculature includes a first vessel portion and at least ~~one~~ two secondary vessel portions extending therefrom; and wherein the superior and inferior ends are sized to be positionable in the first vessel portion and the extension components extending from the limbs ~~is~~ are positionable in the ~~respective~~ secondary vessel portions.

31. (Previously Presented) The system of claim 26, further comprising an anchoring device attached to the superior end.

32. (Previously Presented) The system of claim 31, the anchoring device further comprising a flat wire frame, the flat wire frame embodying structure to enable the anchoring device to compress to a small diameter and to expand to a large diameter.

33. (Previously Presented) The system of claim 31, wherein the anchoring device is self-expanding.

34. (Previously Presented) The system of claim 26, the extension component further comprising a generally cylindrical support structure.

35. (Previously Presented) The system of claim 34, wherein the support structure extends an entire length of the extension component.

36. (Previously Presented) The system of claim 34, wherein the support structure is self-expanding.

37. (Previously Presented) The system of claim 34, wherein the support structure is attached to an inside of the extension component.

38. (Currently Amended) The system of claim 26, further comprising at least one guidewire configured to be routed through an interior of the main component, through ~~the~~ at least one limb and out the opening to thereby provide a path for connecting the extension component to the main component.

39. (Previously Presented) The system of claim 26, further comprising a main delivery catheter, the main catheter including a tubular portion and being sized to releasably receive and deliver the main component within vasculature.

40. (Currently Amended) The system of claim 29, further comprising a delivery catheter including structure that receives ~~the~~ at least one extension component.

41. (Currently Amended) The system of claim 40, the delivery catheter further comprising releasing structure to position ~~the~~ at least one extension component adjacent one of the openings and into sealing engagement with the respective limb.
